

Amendments to the Specification

Please replace the TITLE of the invention, presently found in line 1 of pages 1 and 13, with the following:

PRINTED CIRCUIT BOARD TEST JACK ADAPTED FOR INTERFACE WITH AN EXTERNAL TEST PROBE

Please replace the ABSTRACT of the invention, presently found on page 13, with the following:

A printed-circuit board (PCB) test jack comprises a body portion adapted for mounting on the top surface of a PCB and to provide mechanical support and signal and ground connections to an external test probe. At least one surface mount ground conductor is connected to and extends from the body portion to provide the ground connection; the ground conductors are arrayed for attaching to corresponding surface pads on the PCB's top surface. A single through-hole pin for insertion into a corresponding through-hole on the PCB is electrically isolated from the surface mount ground conductors and is connected to the body portion for providing the signal connection.
